### Heads

<b>JCAPICOVALVE</b>		<b>PICOVALVE</b> <p>Designed by Andy Marshall and licensed by THD Electronics, PicoValve is the compact, low-wattage tone machine. With dual 12AX7s shaping the preamp voicing, and a single 6L6 in the power section, this caged monster is the real deal. From touch-sensitive and punchy cleans, to beefy, heavy Rock tones, the Pico Valve will get you the tone you want without tearing the paint off the walls. What's more, you can custom-tailor your Pico by swapping the power tube with nearly any octal-based tube.</p>	<b>\$579.99</b>
<b>JCA20H</b>		<b>20 Watt Head</b> <p>Pure, simple, and full of tube tone, JCA20H delivers from a single-channel amp with absolutely no gimmick features to dilute the all-tube signal path. Elegance of design both inside and out deliver unflinching reliability in an amp good-looking enough to make a girlfriend jealous. With full EQ control and separate Preamp and Master volumes, JCA20H can deliver spanky cleans through crunchy overdrive.</p>	<b>\$579.99</b>
<b>JCA50H</b>		<b>50 Watt Head</b> <p>50 watts from a pair of 6L6 power tubes and all the features of our JCA100H makes our JCA50H ideal for gigging musicians who need plenty of stage volume with some nice power amp distortion. The Normal channel can range from clean tones to dirty rock riffs. The Overdrive channel is THE Soldano high-gain lead tone. Pair it up with our JCA48S for a powerful half-stack, or one or two of our JCA24S 2x12 cabs for extra versatility</p>	<b>\$999.99</b>
<b>JCA100H</b>		<b>100 Watt Head</b> <p>With two channels of Soldano tone and 100 watts of pure tube power, this amp was made for the big stage. The Normal channel has plenty of headroom to deliver clear, bright clean tones and can be driven hard enough to get downright raunchy. The Overdrive channel is the circuit that made Soldano famous. It's been modeled and imitated, but this is the real-efing-high-gain-deal.</p>	<b>\$1,299.99</b>
<b>JCA100HDM</b>		<b>100/50 Watt Switchable Head with Depth Control</b> <p>The new flagship is based on our popular JCA100H - two channels of Soldano tone and 100 watts of pure tube power. The Crunch channel has plenty of headroom to deliver clear, bright clean tones and can be driven hard enough to get downright raunchy. The Overdrive channel is the circuit that made Soldano famous. The HDM version also includes the famous Soldano Depth Control and a Metal front baffle. The HDM brings the pain from 4 6L6 output tubes in 100w mode, or in 50w mode two tubes are turned off causing the power section to work harder to reach the desired output level, resulting in some pretty hot power amp distortion.</p>	<b>\$1,599.99</b>

### Combos

<b>JCA2112RC</b>		<b>20 Watt Combo</b> <p>JCA2112RC is a "combo" of our JCA20H and JCA12S, with tube-driven reverb included. Easy-access speaker connectors on the rear panel allow JCA2112RC to drive external cabinets either with or without the internal Jet City Eminence Custom driver. Stacked on an additional JCA12S, the speaker volume doubles and the added height brings the controls to arm's length in a small club.</p>	<b>\$799.99</b>
<b>JCA5212RC</b>		<b>50 Watt Combo</b> <p>JCA5212RC is an all-original Soldano design for Jet City Amplification. Soldano's "Crunch" circuit is featured here again – a preamp capable of a wide range of character – from clean and bright to muscular and powerful. And our top-of-the-line combo also includes Soldano's "Clean" circuit – previously only available in the Soldano Lucky 13, the Clean channel is wide-open with no gain control. Each channel also has a dedicated EQ, for added tonal versatility.</p>	<b>\$1,499.99</b>
